```
The invention relates to human kinase PKIN proteins and their corresponding cDNAs. A composition associated with decreased expression of treating a disease or condition associated with decreased expression of PKIN and a composition comprising PKIN antagonist is useful for treating a disease or condition associated with overexpression of PKIN. The disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, teratocarcinoma, Hodgkin's disease); immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atherosclerosis, anaemia, allergies, adult respiratory distress syndrome, atherosclerosis, ancein, bronchitis, Crohn's disease, disbetes (mellitus, multiple sclerosis, Good pasture's syndrome, graves' disease, osteoarthritis, osteoporosis, pancreatitis, portasis Reiter's syndrome, relativist, using Syndrome, uverits, ulcerative colitis, contentating Sidgen's syndrome, uverits, ulcerative colitis, contentating Sidgen's syndrome, uverity protozoal and helminthic infections) concertis, syndrome, hypothyroidism, cerebral palsy, actarateds; cartariosis, congestive heart failure, angina pectoris, myocarditis, aneurysms, congestive heart failure, angina pectoris, myocarditis, congestive heart failure, angina pectoris, myocarditis, dischaemic heart disease, chronic bronchitis, lumg tumours); lipid disease, chronic bronchitis, lowers, and disease, hypocholesterolaemia, obesity). PRN DNA is useful for assessing toxicity of a test compound and in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   241 AAGTATTCCGACACCATAGCTGAGTTACAGGAGCTCCAGCCTTCGGCAAAGGACTTCGAA 300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides, useful for diagnosing, treating or preventing disorders of growth and development, cardiovascular and lipid, and diseases such as cancer, comprise human kinase polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            68 cccarreccaecceeccrccaeecreaarcrerrcracaeggaaaccaccerrrare 127

The polymuclectide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases associated with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a disease, such as obesity or chronic obstructive pulmonary disease. These may also be used for treating obesity/ overweight-associated comorbidities, such as hypertension, diabetes, coronary artery disease, hyperlipidaemia, stroke, galbladder disease, gout, osteoarthritis, sleep apnea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human citron rho/rac-interacting kinase-short kinase polypeptide and polymuclectide for preventing or treating diseases associated with the polypeptide dysfunction, e.g. obesity or chronic obstructive pulmonary disease.
                                                          Nucleotide sequence of citron rho/rac-interacting kinase-short kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "citron rho/rac-interacting kinase-short

New human citron rho/rac-interacting kinase-short kinase polypeptide and polypeptide for preventing or treating diseases associated with the polypeptide dysfunction, e.g. obesity or chronic obstructive pulmonary disease.
XX
New human citron rho/rac-interacting kinase-properties of the polypeptide of properties of the present sequence encodes a human citron rho/rac-interacting kinase-short kinase polypeptide. The polynucleotide and polypeptide of the invention are useful in preventing, ameliorating, or treating diseases cased with the polypeptide dysfunction. The expression vector or the reagent is useful in the preparation of a medicament for modulating the activity of a human citron rho/rac-interacting kinase-short kinase in a ctivity of a human citron rho/rac-interacting kinase-short kinase in a cc disease, such as obesity or chronic obstructive pulmonary disease. These comorbidities, such as hypertension, diabetes, coronary artery disease. CC hyperlipidaemia, stroke, gallbladder disease, gout, osteoarthritis, sleep companea, cancer, thrombolic diseases, polycystic ovarian syndrome, reduced fertility, and depression

New human kinase polypeptide, for diagnosing, preventing and treating cancer, immune system disorders, growth and development disorders, cardiovascular disorders and lipid disorders.

5; Page 207-209; 210pp; English. claim

The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, cureating and preventing cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and development (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Goodpasture's disease, Niemann-Pick's disease, hypercholesterolaemia, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of PKIN in a composition comprising PKIN or an agonist or antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN.

The proteome of a tissue or cell type. PKIN DNA is useful for creating the proteome of a tissue or cell type. PKIN DNA is useful for creating checkin humanised animals or transgenic animals to model human diseases.

The proteome of a tissue or cell type. PKIN DNA is useful for creating and in somatic or germline gene therapy. The present sequence is human proteome. PKIN CDNA

The present into accribed to the properties of the present into present into present into present into present into accribed above and a carrier; (2) a kit composition comprising a polypeptide described above; (3) an isolated nucleic acid molecule which encodes a NOVX protein of the invention; (4) a vector comprising the nucleic acid molecule described above; (5) a cell composition the above vector; (6) an antibody that immunospecifically binds to the polypeptide described above; (7) methods for determining the presence or amount of the above polypeptide or nucleic acid molecule in a disease associated with altered levels of expression of the above comprising an agent that binds to the polypeptide described above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or berrant physiological interactions of the polypeptide described above; (10) a method for identifying a potential therapeutic agent for use in treating a pathology that is related to an aberrant expression or betraing for a modulator of activity or of latency or predisposition to a pathology associated with the polypeptide; (11) methods of the activity of the polypeptide; (12) a method for modulating cor preventing a pathology associated with the above polypeptide. Novx sequences have antidiabetic, anorectic, antibacterial, virucide, immunomodulator, cytostatic, anorectic, antibacterial, virucide, and antilipaemic activities, and can be used in gene therapy. The copypeptide is useful in manufacturing a medicament for treating a syndrome associated with a human disease. The polypeptide or the nucleic acid molecule may be used to diagnose, treat or prevent metabolic.
                                                                                                                                                                                                                                                                                                                                  Smithson G, Millet I, Peyman JA, Kekuda R, Ju J, Li L, Guo X; Patturajan M, Spytek KA, Edinger SR, Ellerman K, Malyankar UM; Ort T, Gorman L, Zerhusen BD, Anderson DW, Zhong M, Catterton E; Ji W, Miller CE, Rastelli L, Stone DJ, Pena CEA, Shenoy SG; Shimkets RA, Rothenberg ME, Leach MD, Agee ML, Berghs C, Dipippo VA; Eisen AJ, Gangolli EA, Rieger DK, Spaderna SK;

```
The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine Kinases, particularly Citron rho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polynucleotides have a use in gene therapy. The encoded novel polypeptides are useful
                                                                                                                                                                                                                          Human; kinase; enzyme; serine-threonine kinase; nootropic; cytostatic;

```
The invention relates to an isolated polyphoticolide and numan citron rho/rac-interacting kinase polypeptide. The isolated polymucleotide comprises a 6165 or 8603 base pair sequence, given in the polymucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK)

polypeptide and polymucleotide are useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction such as obesity associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, ostetae and colon cancer).

Cc cancer including endometrial, breast, prostate and colon cancer).

Cc anorexia, cachexia, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Parkinson's disease or Alzheimer's clisorders, anxiety disorders, Parkinson's disease or Alzheimer's clisoreders, anxiety disorders, Parkinson's disease or Alzheimer's polypeptide is also useful in diagnostic assays or in genetic testing.

CThe expression vector or the reagent is useful in preparing a medicament of modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymicleotide and polypeptide and in soreming for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence represents a DNA sequence relating to the human CRIK protein of the invention
New human citron rho/rac-interacting kinase (CRIK) polypeptide and polynucleotide, useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction, e.g. obesity, diabetes or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a novel human protein that shares structural similarity with animal kinases, including serine-threonine kinases, particularly Citron tho-interacting kinases. The proteins of the invention have nootropic and cytostatic activity. The polymucleotides may have a use in gene therapy. The encoded novel polypeptides are useful for generating antibodies, as reagents in diagnostic assays, for identifying other cellular gene products related to NMP and as reagents in assays for screening for compounds that are useful in the treatment of mental, biological or medical disorders and diseases including cancer. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             996
CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and in screening for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence encoding a human CRIK protein of the invention
                                                                                                                                                                                                             99

The invention relates to an isolated polynuclectide encoding a human citron rho/rac-interacting kinase polypeptide. The isolated polynuclectide comprises a 616 or 8603 base pair sequence, given in the specification. The human citron ho/rac-interacting kinase (CRIK) polypeptide and polynuclectide are useful in preventing, ameliorating, creating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, protester and colon cancer), anorexia, cachexia, bullimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Parkinson's disease or Alzheimer's classes), chronic obstructive pullmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in disgnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a

citron tho/rac-interacting kinase polypeptide. The isolated polymuclacotide comprises to an isolated polypeptide. The isolated polymuclactide comprises of 165 or 8603 base pair sequence, given in the polymuclactide comprises of 165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) to polypeptide and polymuclacide are useful in preventing, ameliorating, or treating diseases associated with human CRIK dysfunction such as obesity and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, prostate and colon cancer).

CC anorexia, cachexia, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, parkinson's disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK colypeptide is also useful in diagnostic assays or in genetic testing.

CT he expression vector or the reagent is useful in preparing a medicament contract nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a cuseful in producing and detecting the polymetering and polypeptide and for use in various assay systems. The methods are contral in producing and detecting the polymetecitie and polypeptide and con agents that modulate the activity of the human CRIK polypeptide. This polymetide sequence represents a DNA sequence correlating to the human CRIK protein of the invention New human citron rho/rac-interacting kinase (CRIK) polypeptide and polymuclectide, useful in preventing, ameliorating or treating diseases associated with human CRIK dysfunction, e.g. obesity, diabetes or invention relates to an isolated polynucleotide encoding a human Disclosure; Fig 4; 237pp; English Alzheimer's disease.

                                                                                                                                                                                                                The invention relates to human myotonic dystrophy type protein kinase (MDPK) polypeptides designated as 13245 and nucleic acid molecules encoding such polypeptides. 13245 molecules are used to develop diagnostic and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating or curing MDPK-related disorders. Polypeptides of the invention are used to develop diagnostic and therapeutic agents for 1345-mediated or related disorders use tumour growth, tumour metastasis, viral infection of a cell, skeletal muscle disorders (e.g. muscular and myotonic dystrophies), immune disorders and neoplastic disorders. The invention is also used in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        8

AAD39191;

Human MDPK CDNA

```
The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises assaying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity eg. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache pain and tissue pain. The present sequence encodes a human protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACTCAACAGCAGATGTCCTCTTTCCCGAGAAGGGATATTAGATGCCCTCTTTGTTCTC 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                     1 ggggagatgttgaagttcaa......tctgagccgcctgatccgta 151
